EDUCATION

University of Massachusetts Amherst

Sep 2023 – May 2027

B.S. Computer Science and Mathematics; Minor: Business

GPA: 3.744/4.0

- Honors: Dean's List, Chancellor's Scholar
- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Computer Systems, Programming Methodology, Machine Learning, Artificial Intelligence, Web Programming, Information Systems, Discrete Math, Linear Algebra, Probability & Statistics

SKILLS

Languages: Python, Java, C++ , C, TypeScript, JavaScript, SQL

Systems & Backend: Distributed Systems, Parallel/Asynchronous Processing, FastAPI, REST APIs, Microservices, Docker, Redis, Linux

Cloud & Infrastructure: Azure Container Apps, Azure Functions, Azure Service Bus, Azure API Management, GitHub Actions, Azure DevOps, CI/CD, Autoscaling, Load Testing

AI-Assisted Development: GitHub Copilot, Copilot Agent Mode, Claude Code, AI-Native Development Workflows

AI/ML & Data: Machine Learning, RAG, LLMs, Information Retrieval, Azure OpenAI, LangGraph, FAISS, Milvus, PyTorch, TensorFlow, Scikit-learn

Security & Observability: Microsoft Entra ID, Key Vault, Managed Identity, OpenTelemetry, Application Insights, Azure Monitor, Distributed Tracing

EXPERIENCE

Siemens Energy

Jun 2026 – Present

Software Engineering / AI Platform Intern

Gurugram, India

- Owned the end-to-end conversion of a single Jupyter notebook prototype into a distributed 3-engine application, parallelizing two long-running processing paths before downstream aggregation and deploying containerized API-worker workloads on Azure.
- Engineered backend infrastructure for a 5-stage enterprise processing pipeline using Python, FastAPI, Azure Container Apps, Service Bus, Cosmos DB, and REST APIs, supporting asynchronous jobs, independent worker scaling, and capacity planning up to ~1,500 monthly requests.
- Reduced end-to-end pipeline runtime from 6m44s to 5m50s (~13%) by replacing unnecessary model processing with deterministic JSON logic and implementing priority-based routing across 4 Azure OpenAI endpoints in 2 regions.
- Instrumented 9 distributed services using OpenTelemetry, Application Insights, and correlation IDs; hardened asynchronous workers with lock renewal, duplicate-job detection, redelivery safeguards, and terminal-state protection, validating production handover with 45 passing unit tests.
- Built CI/CD and deployment workflows using Azure DevOps and GitHub Actions, integrated Key Vault and Managed Identity for secure service access, and load-tested autoscaling behavior across containerized API-worker workloads.
- Built a guardrailed AI-assisted development workflow using GitHub Copilot and Claude Code to extract capabilities from existing services, generate standardized implementations, and route changes through human-reviewed CI/CD before Azure Functions deployment.
- Designed reusable platform tooling across 3 business units, identifying ~40 duplicated modules and standardizing ~60–70 shared capabilities to reduce repeated implementation and shorten equivalent multi-unit development cycles from ~6 months toward 2.5–3 months.

Deloitte Touche Tohmatsu India LLP

Jul 2025 – Aug 2025

Summer Intern – AI Engineer

Gurugram, India

- Engineered a DINOv2 and FAISS HNSW retrieval pipeline across 2,000+ embryo images, achieving 84% accuracy against embryologist annotations.
- Built an ensemble prediction system using XGBoost, Random Forest, and Linear Regression across 30+ clinical features; applied Boruta feature selection to achieve sub-2s inference and improve prediction calibration across age groups by 18%.

National Informatics Centre, Government of India

Jun 2025 – Jul 2025

Summer Intern – AI Engineer

New Delhi, India

- Migrated an internal government chatbot to a multilingual retrieval architecture using Qwen3 embeddings, Milvus vector search, Redis-backed microservices, and Mistral LLM.
- Built modular ingestion and session-management services for Hindi, English, and regional-language queries, improving retrieval scalability and reducing irrelevant or outdated responses by 30%.

PROJECTS

AutoApply OS – Job Application Autofill and Tracking Platform

Apr 2026 – Present

- Built an active-beta full-stack platform using Next.js 14, TypeScript, Supabase, PostgreSQL, and a Manifest V3 Chrome extension with secure authentication, Row-Level Security, pgcrypto PII encryption, and Vault-stored OAuth tokens.
- Designed browser-to-backend workflows for autofill and application tracking, integrating authenticated API access, persistent user data, and extension-driven interactions across a multi-service product architecture.
