EDUCATION

University of Massachusetts Amherst

B.S. Computer Science and Mathematics; Minor: Business

Sep 2023 – May 2027

GPA: 3.744/4.0

- Honors: Dean's List, Chancellor's Scholar
- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Computer Systems, Machine Learning, Artificial Intelligence, Web Programming, Information Systems, Linear Algebra, Probability & Statistics

SKILLS

AI & Agentic Engineering: MCP, Microsoft Agent Framework, LangGraph, Azure AI Foundry, Azure OpenAI, RAG, Tool Calling, Agentic Workflows, Claude Code, GitHub Copilot, Copilot Agent Mode, Cursor

Languages & Paradigms: Python, Java, C++, C, TypeScript, JavaScript, SQL, Object-Oriented Programming

Backend & Distributed Systems: FastAPI, Node.js, REST APIs, Microservices, Redis, PostgreSQL, Cosmos DB, Docker, Podman

Cloud & DevOps: Azure Container Apps, Azure Functions, Azure Service Bus, Azure API Management, Azure DevOps, GitHub Actions, CI/CD, Key Vault, Managed Identity

Observability & Security: OpenTelemetry, Application Insights, Azure Monitor, Grafana, Microsoft Entra ID

EXPERIENCE

Siemens Energy

Jun 2026 – Present

Software Engineering / AI Platform Intern

Gurugram, India

- Owned the end-to-end conversion of a single Jupyter notebook prototype into a distributed 3-engine application, parallelizing processing before downstream aggregation using Python and FastAPI; deployed through Microsoft Agent Framework/Azure AI Foundry and containerized API-worker services on Azure Container Apps, enabling an MVP demo within 2 weeks.
- Designed and implemented a standardized MCP tool factory spanning 3 business units and ~6 workflows; authored reusable conversion boilerplates, built ~10 agent-callable tools toward a ~60–70 capability target, and identified ~40 duplicated modules for consolidation, targeting a reduction in equivalent multi-unit development cycles from ~6 months to 2.5–3 months.
- Built a guardrailed agentic workflow that extracts capability specifications and executable logic from legacy services, injects them into standardized MCP templates, uses Claude Code/GitHub Copilot coding agents for implementation, and routes generated tools through human-in-the-loop CI/CD review before automated Azure Functions deployment.
- Defined an agent evaluation roadmap around tool-call failure rate, task success, groundedness, confidence scoring, and bid-manager acceptance feedback, with historical CRM outcomes as a continuous-improvement signal.
- Engineered an enterprise AI bid platform supporting 3 workflows and a 5-stage RFP pipeline across document collections from ~50 to 10,000 pages, with capacity planning up to ~1,500 monthly UAT requests; reduced end-to-end latency from 6m44s to 5m50s (~13%) using deterministic JSON logic and APIM routing across 4 Azure OpenAI endpoints in 2 regions.
- Instrumented 9 distributed microservices with OpenTelemetry, Application Insights, Azure Monitor, and correlation tracking; hardened Service Bus workers with lock renewal and duplicate-job protection, implemented Microsoft Entra ID-based identity controls, and validated production handover with 45 passing unit tests.

Deloitte Touche Tohmatsu India LLP

Jul 2025 – Aug 2025

Summer Intern – AI Engineer

Gurugram, India

- Engineered a DINOv2 and FAISS HNSW retrieval pipeline to assign Gardner scale ratings to 2,000+ embryo images, achieving 84% accuracy against embryologist annotations.
- Integrated morphology features into an ensemble forecasting system using XGBoost, Random Forest, and Linear Regression across 30+ clinical variables; applied Boruta feature selection to achieve sub-2s inference and improve prediction calibration across age groups by 18%.

National Informatics Centre, Government of India

Jun 2025 – Jul 2025

Summer Intern – AI Engineer

New Delhi, India

- Migrated an internal government chatbot to a multilingual RAG architecture using Qwen3 embeddings, Milvus vector search, Redis-backed microservices, and Mistral LLM, reducing irrelevant or outdated responses by 30%.

PROJECTS

AutoApply OS – Job Application Autofill and Tracking Platform

Apr 2026 – Present

- Built an active-beta product using Next.js 14, TypeScript, Supabase, PostgreSQL, and a Manifest V3 Chrome extension with one-time authentication, Row-Level Security, pgcrypto PII encryption, and Vault-stored OAuth tokens.
